

## EIZO Demonstrates Environmental Consciousness by Achieving EPEAT Gold Certification for Sustainability

**Hakusan, Japan, March 16, 2023** – EIZO Corporation (TSE: 6737) announced that six of its FlexScan sustainable monitors were certified by EPEAT (Electronic Product Environmental Assessment Tool) with the highest ranking of Gold.

EPEAT is a global ecolabel that aims to assess the impact that electronic products have on the environment. The criteria cover reduction of hazardous substances, recyclability, long lifecycle, product collection and recycling processes, use of recycled plastics, etc. The assessment also extends to company-wide efforts, such as energy management throughout the supply chain, development of occupational health and safety standards, as well as a range of other initiatives. Depending on the degree of compliance with the standard, products are registered for one of three rankings – Bronze, Silver, or Gold.

EIZO makes environmentally conscious product design and manufacturing a priority, focusing on methods to reduce environmental impact throughout the product lifecycle. These initiatives, which are in line with EPEAT's policies, contributed to EIZO's FlexScan EV Series monitors achieving EPEAT Silver in April 2020. EIZO has furthered its sustainability initiatives through reduction of greenhouse gas emissions and by continuing to prioritize environmental consciousness, respect for human rights, and improvement of labor conditions throughout the supply chain. These actions have been recognized as meeting the higher criteria of the EPEAT Gold rank.

Achieving EPEAT Gold rank is an objective recognition of not only EIZO's environmentally-friendly product design, but also of the company's wider business practices that aim to contribute to a more sustainable society.
